Product features:

- Regal® R&O is a premium quality, inhibited turbine oil formulated from highly refined base stocks and special rust, oxidation and foam inhibitors.

Customer benefits

**Prolonged oil service life**
The superior oxidation stability provided by the multi-component inhibitor system resists oil breakdown during exposure to high temperature conditions, ensuring longer service life.

**Saves on maintenance and downtime**
The highly refined base stocks and multi-component oxidation inhibitor system resist the formation of harmful sludge and varnish deposits. The special rust inhibitor protects components against corrosion.

**Trouble-free operation**
The excellent water separability of the highly refined base stocks and special inhibitor system ensure rapid settling of harmful water accumulated from steam condensate. The non-silicone foam inhibitor allows rapid release of entrained air while minimizing foam formation enabling reliable operation of sensitive hydraulic control devices.

**Saves on inventory**
The premium quality rust and oxidation inhibited formulation has multipurpose capability in a wide range of industrial applications for which this type of product is recommended, simplifying oil inventories and reducing the possibility of using the wrong lubricant.

Applications

- Steam and hydraulic turbines operating under all service conditions
- Industrial gas turbines operating under moderate service conditions where the oil is not exposed to excessively high temperatures, or gear sets requiring enhanced load carrying performance
- Centrifugal, rotary and reciprocating compressors, turbo-blowers and centrifugal pumps, requiring a rust and oxidation inhibited oil (not recommended for use in breathing air compressors)
- Bath and circulating systems supplying rolling element bearings of all types, lightly loaded gear sets, vacuum pumps, machine tools (including computer controlled units), conveyors, electric motors, and low to moderate pressure hydraulic pumps where anti-wear properties are not required
- Also recommended as a heat transfer fluid in both closed and open heat transfer systems with forced circulation. (Please see our separate product data sheet for more detailed information)
ENVIRONMENT, HEALTH and SAFETY
Information is available on this product in the Material Safety Data Sheet (MSDS) and Customer Safety Guide. Customers are encouraged to review this information, follow precautions and comply with laws and regulations concerning product use and disposal.

### Performance standards

- German Standard DIN 51515 Part 1.
- Meets the requirements of major turbine builders including GE, Siemens-Westinghouse, Alstom (and former ABB).
- David Brown Table M Gear Oil Grades OM, IM, 2M, 3M (ISO 32 to 100, respectively)
- ANSI/AGMA 9005-E02: AGMA Lubricant Nos. 1, 2, 3 (ISO 46, 68, 100, respectively)
- Cincinnati Lamb (formerly Cincinnati Milacron) P-38, P-55, P-54 (ISO 32, 46, 68, respectively).
Regal® R&O

Service considerations

Premium quality turbine oils must be capable of lubricating and cooling the bearings while protecting the system against rust, corrosion and harmful deposits. Since turbine equipment is normally used in key applications, the reliability of the rotating machinery and its lubricant is critical.

Regal R&O oils have demonstrated superior service in all types of industrial steam, gas and hydraulic turbines. Turbine equipment is expected to have a long, reliable service life because of its high cost and type of service such as electrical power generation. Periodic monitoring of the oil in service is recommended to assure satisfactory performance of the turbine. The principal reasons for monitoring are two-fold: firstly, to determine the condition of the used oil and secondly, to disclose environmental or operational problems within the equipment. The oil should be visually inspected by the operator at frequent intervals for contaminants and/or appearance changes. If the appearance is normal, then semi-annual samples are sufficient for laboratory evaluation. Samples should be taken from the discharge side of the oil pump while the system is circulating.

During service, effective purification of the lubricating oil is recommended for the removal of contaminants such as water and solids.

Care should be taken to insure against cross-contamination with other oils, as this could reduce the performance characteristics of Regal R&O.
